

Task/Criterion (Note: each level reached if conditions met)	Preconditions	None	Unacceptable	Poor	Fair	Good	Excellent
Task 1: Stakeholders (5)		(0) Not attempted	(1) Much fewer than the minimum number of stakeholders required were identified, or many of them are incorrect. The notion of a stakeholder was barely understood.	(2) Fewer than the minimum number of stakeholders required were identified, or some of them are incorrect. Stakeholder notion partially understood.	(3) At least the minimum number of stakeholders were identified, but they are only taken from the spec, and the justifications are sometimes unclear (not clear if notion fully understood).	(4) All the task requirements were respected without considering a wide variety of stakeholders, and the justifications are always clear. Notion correctly understood.	(5) Excellent choice of wide variety of stakeholders, demonstrating excellent understanding of the context, and very clear justifications.
Task 2: Ambiguities and addressing them (10)		(0) Not attempted	(2) Very few ambiguities discussed even if some others were addressed later in the coursework	(4) A small number of ambiguities discussed even if some others addressed later. Requirements elicitation techniques only partially understood.	(6) Reasonable number of ambiguities, reasonably matching those addressed later. Some reasonable assumptions and/or who to approach. Elicitation techniques not fully understood.	(8) Good number of ambiguities, usually matching those addressed later. Good vision of who to approach and how, assumptions. Elicitation techniques understood.	(10) A lot of effort in interpreting the spec, with excellent considerations of context in the choice of who to approach and elicitation techniques.
Task 3: Use case diagram and use case prioritisation (15)		(0) Not attempted	(3) Very incomplete use case diagram, with mistakes in the notation and many missing use	(6) Some mistakes in the use case diagram notation. Many missing use cases	(9) Use case diagram notation mostly correct. A couple of missing use cases and/or actors. Use	(12) Use case diagram notation, use cases, actors all understood. All	(15) No mistakes or omissions in the diagram. Very good sense of the scope of

			cases (more than half) and actors.	and actors. Use case concept not properly understood.	case concept understood, actor concept partially understood. Prioritisation a good start but incomplete discussion or considering only one criterion for deciding priority.	main use cases and actors identified. Prioritisation a reasonable discussion considering a few criteria.	the chosen use cases. Prioritisation an excellent discussion considering several criteria, showing excellent understanding of the context.
Task 4: Use case descriptions (20)	At least 'Poor' in Task 3.	(0) Not attempted	(4) Very incomplete answer, not meeting numbers of use cases required to be described and/or with mostly incorrect use of template.	(8) Some of the use cases required were not covered and/or many mistakes/ omissions in the interpretation of the use case templates' main success scenario and extensions.	(12) Meeting the number/detail requirements, attempt to reference use cases where useful. A few of the fields other than main success scenario and extensions not understood, and a few mistakes/ omissions.	(16) Meeting the number/detail requirements, referencing use cases, max. one template field misinterpreted. Reasonably complete wrt. spec & assumptions (Task 2), consistent (no contradictions)	(20) Meeting the number/detail requirements, referencing use cases, template all correctly interpreted. Complete wrt. spec & assumptions, and consistent.
Task 5: Non-functional requirements (10)		(0) Not attempted	(2) Very incomplete answer, not meeting numbers of categories/ non-functional reqs or meeting but incorrect formatting, and incorrect	(4) Numbers of categories/ non-functional reqs not fully met and/or frequent mix with functional reqs and not all	(6) Meeting the number of categories/ non-functional reqs. Notion of non-functional requirement and categories understood, with	(8) Meeting the number of categories/ non-functional reqs, at minimum or with little variety for the reqs. Notion of non-functional	(10) A lot of effort to consider a variety of categories and provide a variety of correct measurable non-
